

# SUPRA-SUSTAINABLE

## THE SUSTAINABLE SOLUTION FOR SINGLE-USE PPE

### Supra-Sustainable benefits include:

- Reduces the overall amount of plastic used in the end product
- A cost-efficient plastic-free way of using sustainable materials over PCR.
- Less expensive, more readily available than PCR.
- Significantly reduces processing cycle times increasing output.
- Processes at lower temperatures.
- Saves energy during production.
- Does not affect recyclability.
- Can be combined with colour masterbatch and other additives.
- Falls within the new UK taxation laws regarding recycled content if required (*subject to future government advice*).
- Lowers CO2 footprint.
- Climate-Smart.
- Free from allergens.
- FDA Food Contact Approved.

# SUPRA-SUSTAINABLE

For many, particularly those working on the frontline against COVID-19, personal protective equipment (PPE) has proved vital in protecting us from contracting or spreading the highly infectious virus.

However, despite the indisputable life-saving benefits of PPE, the additional burden of single-use items potentially coming into contact with the environment cannot be ignored.

Broadway has developed a marine-based additive that is perfect for use in the manufacture of PPE.

As part of our **Supra PROCESS+ range** of performance additives, our **Supra-Sustainable** marine-based climate-smart solution essentially solves outreach, ecological, and manufacturing challenges.

This innovative environmental additive enables manufacturers to produce a

wide range of PPE components that can now be both safe and sustainable.

As well as significantly reducing the amount of plastic materials used during manufacture, PPE producers can also enjoy several other benefits that help reduce energy usage during manufacturing to produce PPE gowns that are both thinner and stronger, yet totally recyclable at the end of life.

**Supra-Sustainable** is available in either masterbatch or rotational powder formulations and can be supplied as a stand-alone additive or incorporated into a specific colour for a cost-effective environmental solution.
